

Executive Pitch Summary: RevivePay solves the 30% ARR lost to Indian Core Banking Server (CBS) midnight downtime (NPCI_U30), ₹45 bank bounce penalties, delayed B2B invoice collection cycles, and illegitimate chargebacks.

1. Problem vs. Solution Matrix

Challenge	RevivePay Autonomous Solution	Fintech Business Impact
Midnight Bank Downtime (NPCI_U30)	Intercepts issuer CBS batch lock; reschedules retry to 08:15 AM IST.	Zero ₹45 bounce fines; 94% subscription recovery rate.
Insufficient Balance / Card Expired	Dispatches multi-lingual WhatsApp recovery in 5 Indian languages with live UPI QR.	68% collected in 24h via 1-click GPay/PhonePe.
Delayed B2B Invoices	Matches 18% GST tax lines and logs Promise-to-Pay (PTP) commitments.	DSO reduced from 45 days down to 14 days.
Fraudulent Chargebacks	Auto-packages 3DS 2.0 Auth RRN, delivery OTP, and courier waybill in 3 seconds.	91.2% dispute defense win rate.
Audit & Reconciliation	Immutable Double-Entry Balanced Ledger with RBI Merkle Root Certificate.	100% statutory compliance; zero discrepancy.

2. 5-Minute Timed Voiceover Script (Word-for-Word)

[00:00 - 00:50] Scene 1: Introduction & The Bank Downtime Problem

Screen: Subscriptions Dashboard, Chaos Monkey banner, and Live Bank Telemetry ticker

"Hello judges and evaluators! Welcome to **RevivePay Sentinel**—the autonomous revenue recovery and fintech defense engine built natively for the Razorpay ecosystem. In India's digital economy, subscription companies lose over 30% of their recurring revenue to structural banking failures. At the top of our console, our live **Bank Telemetry ticker** monitors Core Banking Server downtime across SBI, HDFC, and ICICI. Every night between 1:00 AM and 4:30 AM, banks lock their servers for batch processing. When an auto-debit fails under error code NPCI_U30, traditional gateways retry blindly—triggering **₹45 bounce penalties** on customer accounts and causing permanent churn. RevivePay solves this by intercepting the failure and autonomously rescheduling the debit to the 08:15 AM morning window."

[00:50 - 01:40] Scene 2: Batch Auto-Pilot Execution & NPCI_U30 Reschedule

Screen: Clicking 'Step (1 Txn)', diagnosing NPCI_U30, and running 'Instant Full Batch'

"Let's watch the Batch Auto-Pilot in action. As transactions arrive, Sentinel's **Diagnosis Agent** evaluates the failure telemetry in real time. When it detects an issuer bank server outage on an SBI or HDFC account, it does not hammer the switch. Instead, it suppresses immediate retries, saving the customer from bounce charges, and queues the mandate for the optimal morning liquidity slot. When we run the **Instant Full Batch**, Sentinel

processes the entire cohort in parallel, saving thousands of rupees in bank bounce penalties and recovering over 68% of lost ARR automatically."

[01:40 - 02:30] Scene 3: WhatsApp Conversational Recovery & Live Scannable UPI QR

Screen: WhatsApp modal, switching between Hindi and Tamil, live dynamic UPI QR code

"When an account requires direct customer action—such as an expired card or insufficient balance—Sentinel dispatches our **Vernacular Recovery Agent**. Here in the WhatsApp recovery card, you can see personalized outreach in **5 Indian languages**—including Hindi, Tamil, Telugu, and Hinglish. Within strict merchant policy bounds, Sentinel approves a small retention credit based on customer Lifetime Value. Notice the **live dynamic UPI QR code**: a customer can simply point their smartphone camera, open Google Pay, PhonePe, or Paytm, and settle the subscription renewal in under 5 seconds with zero human agent involvement!"

[02:30 - 03:20] Scene 4: Decision Audit Trail & B2B Receivables / PTP

Screen: Decision Audit Trail, downloading CSV, then switching to B2B Receivables & PTP

"Transparency and governance are paramount in fintech. In the **Decision Audit Trail**, every single diagnosis, policy check, and incentive dispatch is sealed with a **cryptographic SHA-256 token** and can be exported as a CSV report with one click. Next, in **B2B Receivables**, we solve overdue corporate invoices. RevivePay automatically matches 18% GST tax lines, tracks structured **Promise-to-Pay commitments**, and collects payments directly through Razorpay Smart Collect—reducing collection cycles from 45 days down to 14 days."

[03:20 - 04:10] Scene 5: DisputeShield & 4-Point Evidentiary PDF Export

Screen: DisputeShield tab, opening claim dossier, and clicking 'Export as PDF'

"Next is **DisputeShield**, our chargeback defense engine. Fraudulent 'product not received' claims cost Indian merchants crores. Traditional businesses lose disputes because gathering evidence takes days. DisputeShield changes the game. In under **3 seconds**, it compiles: 1. 3DS 2.0 Auth RRNs, 2. Geolocation-verified delivery OTP timestamps, 3. Real-time courier waybills, and 4. Device IP fingerprints. When I click '**Export as PDF**', a formal, arbitration-grade statutory dossier is generated instantly client-side, achieving a **91.2% dispute win rate** across Visa, Mastercard, and RuPay."

[04:10 - 05:00] Scene 6: Double-Entry Ledger, Agentic Commerce & Conclusion

Screen: ROI & Cash Forecast trial balance, Agentic UAP modal, RBI Certificate

"Finally, behind the scenes, RevivePay features a full **Fintech Architecture**: An immutable **Double-Entry Financial Ledger** where total debits mathematically equal total credits with zero discrepancy; **Agentic Commerce UAP** for machine-to-machine autonomous procurement; and official **RBI e-Mandate Cooling-Period Compliance Certificates** with SHA-256 Merkle root hashes. Supported by **50 passing automated unit tests**, RevivePay transforms lost revenue into recovered profit on autopilot. Thank you!"
